Medical technology manufacturer Rudolf Storz introduces itself

Emmingen - Rudolf Storz has been a contract manufacturer in the medical technology sector since 1949. The family business has been owned by the Storz family for over three generations. In September, 2022, Rudolf Storz GmbH was taken over by Stuckenbrock Medizintechnik GmbH and will continue to operate at its current location. With over 140 employees at its headquarters in Emmingen and a broad portfolio of over 7,000 medical technology products, the company is active worldwide.

Rudolf Storz Senior founded the medical technology company in 1949. The family business has been owned by the Storz family for over three generations and has been managed by F. Stuckenbrock since 2022.

Rudolf Storz Senior thus laid the foundation stone for the Rudolf Storz company, which has developed into a future-orientated contract manufacturer in the medical sector over the last 75 years. It all began in Tuttlingen, with the manufacture of medical products, in small quantities from today's perspective, by hand without a large fleet of machines. In 2000, the Rudolf Storz company moved to the Hundsgrücken industrial estate in Emmingen-Liptingen. The new location marked the beginning of a new chapter in the company's history. The growth of the company meant that there were now also new products. The larger production and storage capacity also increased the number of qualified employees. Due to the successful development of the Rudolf Storz company and the expansion of the product portfolio, the

company continued to grow. This resulted in the construction of a 3-storey office building. In 2011, the foundations were also laid for a sustainable company.

With the construction of its own solar panels, an innovative wind turbine and the use of the first electric car in the region, Rudolf Storz demonstrated his commitment to a sustainable future even back then.

In 2024, the company moved to an additional building in the immediate vicinity of the main building. This new building houses Rudolf Storz's modernised logistics centre (Plant 3) on an area of 1,200 m².

Rudolf Storz currently employs over 140 people from 12 nations and has a production area of 5,500 m² (Plant 1 and Plant 2). The product portfolio now comprises over 7,000 products. With regard to surgical instruments, the range of services offered by Rudolf Storz today extends from services such as electropolishing, passivation and grinding to the development of customised solutions and assembly with a high degree of vertical integration.
